(a) Plastic strain just before sliding (0.125 m)
z (m)
x (m)
log10 plastic strain
(b) Basal slip as the pressure rises
mean basal plastic strain
base pore pressure u (kPa)
DES, 0.5 m, 404 steps
DES, 0.25 m, 404 steps
DES, 0.125 m, 404 steps
DES, 0.25 m, 808 steps
pointwise yield
Davis, non-associated
infinite slope, FS = 1
last PT equilibrium
(c) Pressure at fixed slip, by mesh
base pore pressure (kPa)
mesh spacing (m)
infinite slope, FS = 1
Davis, non-associated
pointwise yield
onset of basal yield
plastic strain 0.001
plastic strain 0.002
last PT equilibrium
filled: 808 steps
